MANERO RETROGRADE

BRAND PHILOSOPHY

Entrepreneurs are people who have an idea and who dare to do something new. They follow their vision and their own path. Carl Friedrich Bucherer expertly blended tradition with innovation by blending the jeweler's filigree craft with the watch maker's precision. In 1888, out of his passion for watchmaking, he formed his first company in Lucerne, a company which has always been and still is owned entirely by the family. Right up to the present day, the founder's philosophy has been reflected in the Carl F. Bucherer brand and its timepieces. As the only watch brand to have its origins in Lucerne, Carl F. Bucherer has been able to develop in its own unique way.

CARL F. BUCHERER

FINE SWISS WATCHMAKING

Legend

- A: 24-hour corrector
- Day of the week
- 24-hour/second time zone
- Crown
- Position 1: Set date
- Position 2: Set time
- Second
- Date
- Power reserve

Your watch

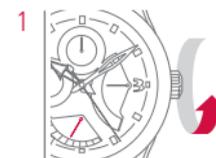

This perfectly-formed watch impresses you with its noble restraint and its eye-catching elegance. Its mechanical works are impressive due to its automatic winding system and additional useful functions. The timepiece has four additional indications and seven hands in the most accessible format. The 24-hour indication can be used as two time zones. The power reserve indication ensures that the movement does not run out of power. And in addition to the retrograde date, it also shows the day of the week.

Technical Data

Automatic movement	CFB 1903
Depth of the movement	5.1 mm
Diameter of the movement	26.2 mm
Number of jewel bearings	34
Water resistance	30 m (3 atm)
(see the chapter on "Water resistance")	

Start the watch

The movement is wound by the motion of the wrist when worn. When not worn, the watch stops after approximately 42 hours and has to be wound manually.

1 Rotate the crown clockwise until the power reserve display indicator has reached the middle of the scale.

Read the power reserve

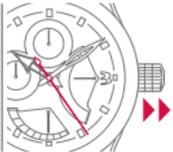

The power reserve indication shows the power stored in the spring housing of the automatic movement.

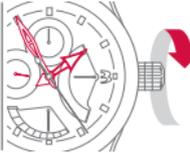

1 The entire display shows a power reserve of about 42 hours.

Set day of the week

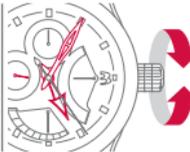

The concept of the calendar mechanism requires that the day of the week be entered, followed by the date.

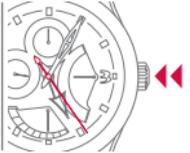

1  Pull the crown until it is in position 2. The second hand does not move.

2  Set the current day of the week by rotating the crown counter-clockwise. Then set the current time.

Set time

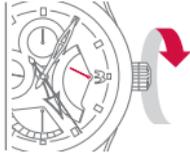

In order for the date to properly move at midnight, the hour hand must intentionally be set to a.m. or p.m. based on the current time.

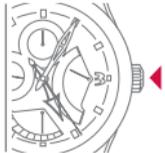

1  Intentionally set the current time at a.m. or p.m. by rotating the crown.

2  Push the crown back to the initial position. The second hand is back in motion.

Set the date

1  Pull the crown into position 1.

2  Set the current date by rotating the crown counter-clockwise.

3  Push the crown back to the initial position.

Set the 24-hour indication

The second time zone must not be set directly after the time is set if the minute hand is being pushed counterclockwise. You should wait about 30 minutes to set the second time zone.

1  Use a corrector pin to press corrector A repeatedly until the hand is on the desired hour.

Cleaning and maintenance

Cleaning: To clean the outer surface of the watch, wipe it gently with a microfiber cloth. Use a fine toothbrush and a bit of soapy solution to clean the back of the watch and the metal band. Dry using a lint-free towel. Minimize contact between the leather straps and the water.

Maintenance: As a mechanical instrument, a watch requires maintenance by an authorized service center about once every four years.

Water resistance

A watch tested to 3 atm (30 m) is resistant to sweat, drops of water and rain. Water resistance is guaranteed only if the crown is in the initial position and should be checked once per year.

The binding nature of meter data:

30 m (3 atm)	Do not swim/dive
50 m (5 atm)	Bath, shower, swim
100 m (10 atm)	Swim, snorkel
200 m (20 atm)	Swim, snorkel, dive
300 m (30 atm)	Deep-sea diving

Guarantee

Your Carl F. Bucherer watch was made with great care by our watchmakers using the strictest quality guidelines. However, if there is a defect in materials or manufacture, Carl F. Bucherer provides a two-year guarantee from the date of purchase. The guarantee does not cover normal wear and tear or damage caused by improper use of the watch. The guarantee is valid if the guarantee certificate was filled out completely by an official Carl F. Bucherer dealer when the watch was purchased. If there is damage, please contact your official Carl F. Bucherer dealer or an official Carl F. Bucherer service center. Please provide the watch with the fully-filled-out guarantee certificate.

Additional watch models

You can find the Carl F. Bucherer collection and information about all the watch lines at www.carl-f-bucherer.com. Here you can also order the company magazine "Insight by Carl F. Bucherer", which informs you about new products, technical developments and events. You can also order the company catalog with a selection of the watch collections of Carl F. Bucherer timepieces and have it delivered to your house.
