# PATHOS DIVA

## BRAND PHILOSOPHY

Entrepreneurs are people who have an idea and who dare to do something new. They follow their vision and their own path. Carl Friedrich Bucherer expertly blended tradition with innovation by blending the jeweler's filigree craft with the watch maker's precision. In 1888, out of his passion for watchmaking, he formed his first company in Lucerne, a company which has always been and still is owned entirely by the family. Right up to the present day, the founder's philosophy has been reflected in the Carl F. Bucherer brand and its timepieces. As the only watch brand to have its origins in Lucerne, Carl F. Bucherer has been able to develop in its own unique way.

FINE SWISS WATCHMAKING

Legend

- Date
- Crown
- Position 1: Set date
- Position 2: Set time
- Second

Your watch

The Pathos is housed in a filigree-pattern case, providing a multidimensional interplay of form and color. With its classy impression, the Pathos radiates elegance and exclusivity. Because of the great expertise of the jewelers, this has led to a feminine watch combining exclusive charisma with comfort when wearing it.

Technical Data

Automatic movement	CFB 1963
Depth of the movement	4.8 mm
Diameter of the movement	20 mm
Number of jewel bearings	25
Water resistance	30 m (3 atm)
(see the chapter on "Water resistance")	

Start the watch

The movement is wound by the motion of the wrist when worn. When not worn, the watch stops after approximately 38 hours and has to be wound manually.

Set time

In order for the date to properly move at midnight, the hour hand must intentionally be set to a.m. or p.m. based on the current time.

## Set the date

1 Pull the crown into position 1.

2 Set the current date by rotating the crown clockwise.

## Secure the crown

**Important:** To ensure water resistance, the crown must be in the initial position when the watch is worn.

1 Push the crown back to the initial position.

## Cleaning and maintenance

**Cleaning:** To clean the outer surface of the watch, wipe it gently with a microfiber cloth. Use a fine toothbrush and a bit of soapy solution to clean the back of the watch and the metal band. Dry using a lint-free towel. Minimize contact between the leather straps and the water.

**Maintenance:** As a mechanical instrument, a watch requires maintenance by an authorized service center about once every four years.

## Water resistance

A watch tested to 3 atm (30 m) is resistant to sweat, drops of water and rain. Water resistance is guaranteed only if the crown is in the initial position and should be checked once per year.

**The binding nature of meter data:**

30 m (3 atm)	Do not swim/dive
50 m (5 atm)	Bath, shower, swim
100 m (10 atm)	Swim, snorkel
200 m (20 atm)	Swim, snorkel, dive
300 m (30 atm)	Deep-sea diving

## Guarantee

Your Carl F. Bucherer watch was made with great care by our watchmakers using the strictest quality guidelines. However, if there is a defect in materials or manufacture, Carl F. Bucherer provides a two-year guarantee from the date of purchase. The guarantee does not cover normal wear and tear or damage caused by improper use of the watch. The guarantee is valid if the guarantee certificate was filled out completely by an official Carl F. Bucherer dealer when the watch was purchased. If there is damage, please contact your official Carl F. Bucherer dealer or an official Carl F. Bucherer service center. Please provide the watch with the fully-filled-out guarantee certificate.

## Additional watch models

You can find the Carl F. Bucherer collection and information about all the watch lines at [www.carl-f-bucherer.com](http://www.carl-f-bucherer.com). Here you can also order the company magazine "Insight by Carl F. Bucherer", which informs you about new products, technical developments and events. You can also order the company catalog with a selection of the watch collections of Carl F. Bucherer timepieces and have it delivered to your house.
